TABLE OF CONTENTS-

1. Introduction

2. Project Objectives

3. Languages used HTML, CSS, JAVA SCRIPT

4. Home page (index.html)

5. User Registration and Login page (login.html)

6. Shipping page (shipping.html)

7. About us page (about-us.html)

8. Contact us page (contact-us.html)

9. CSS (style.css)

10. JAVA SCRIPT (java-script.js)

1. INTRODUCTION -

The purpose of this project is to develop a single-page e-commerce website that allows users to browse and purchase products online. The website aims to provide a user-friendly interface and a seamless shopping experience. This report outlines the key features and functionalities implemented in the e-commerce website. The name of this website is mobishopie which supplies various types of mobile phones to the customers.

2. PROJECT OBJECTIVES -

- Implement a user registration and login system to manage user accounts.
- Different categories of products.
- Collect user's address and billing information for order fulfilment.
- Provide an order placement and confirmation page.
- Include additional pages such as About Us, Contact Us, Offers, and Blogs to enhance user experience.
- Integrate Google Sheets to collect form data for further analysis.

3. LANGUAGES USED -

HTML (Hypertext Markup Language):

HTML forms the backbone of the website's structure and content. It is used to create the layout, define the different sections, and organize the various elements on the page. In the project, HTML is employed to create the navigation menu, header, footer, product listings, forms for user registration, address, and billing, as well as the content for additional pages like About Us, Contact Us, Offers, and Blogs.

CSS (Cascading Style Sheets):

CSS is responsible for styling the website and enhancing its visual appearance. It is used to define colors, fonts, spacing, alignments, and other design aspects. In the project, CSS is applied to customize the overall layout, typography, color schemes, button styles, image positioning, and other visual elements of the e-commerce website. It ensures a consistent and visually appealing presentation across different devices and screen sizes.

JavaScript:

JavaScript brings interactivity and dynamic functionality to the website. It allows for user interactions, data manipulation, form validation, and the implementation of various features. In the project, JavaScript is utilized for tasks such as handling user login and registration processes, managing the shopping cart functionality, implementing "Buy Now" options, validating form inputs, and displaying notifications or alerts to the users. JavaScript may also be used to retrieve and display product data from a database or interact with external APIs for payment processing or other integrations.

4. Home Page (index.html) -

It contains navbar, carousel, some cards of popular products, products and footer.

Code part :

```
